Getting Started
ProQuest Dialog AMED can be accessed remotely from the e-Resources page on the RSM website: https://www.rsm.ac.uk/resources/search-the-e-resources by logging in to the Medical databases using your RSM registered e-mail address and password.

AMED is provided in its entirety (‘1985 - current’). To search AMED, click the checkbox beside it followed by the button: Use selected databases.

What is AMED?
Allied & Complementary Medicine (commonly known as AMED) covers complementary or alternative medicine, palliative care and several professions allied to medicine. Areas supported include acupuncture, homeopathy, diet therapy, occupational therapy, physiotherapy, osteopathy and psychotherapy. Over 500 biomedical journals are indexed regularly and relevant articles are also taken from other general journals. The database is strong on European coverage. Newspapers and books are also indexed. Updated monthly. For further information, click the button: on the opening screen.

Textword Searching
To search for a word or phrase appearing anywhere in the document, use the following search tips:

Truncation
To search for all words beginning with a particular stem, you can use the wildcard * (asterisk). It is recommended that you specify a number of characters after the wildcard.

Linking Search Terms
It is possible to link terms in several ways to make your search broader or more focussed. Use one of the following:

"..."
Enclosing terms in quotation marks specifies that words must be next to each other and in the order specified. Use to find precise phrases.
Example: "chronic fatigue syndrome"

OR
OR specifies that at least one of the terms must be present in documents retrieved. Use OR to group synonyms or alternative terms.

AND
AND specifies that all terms must be present in each of the documents retrieved. Use AND to connect concepts.

PRE/n
PRE/n specifies that terms must be present within a specified number (n) of words of each other in that exact order in each of the documents retrieved.
Example: out pre/3 hours (finds ‘out of hours’ as well as ‘out of surgery hours’)

NEAR/n
NEAR/n specifies that terms must be present within a specified number (n) of words of each other in each of the documents retrieved.
Example: breast near/3 cancer (finds ‘breast cancer’ as well as ‘cancer of the breast’)

NOT
NOT specifies that a term must not be present in documents retrieved. Use NOT to exclude information you have already viewed or an unrelated topic (otherwise use with caution).

(...)
Terms in parentheses (brackets) are processed first. If you mix different links, you must use parentheses to ensure the correct search logic.
Example: (hiv or aids) near/5 testing

Field Searching
In order to add precision to a search, you are able to narrow your search to a specified field. The drop-down menu to the right of the search box allows you to select precise fields (e.g. Document Title, Author, Publication Title, Abstract, etc), prior to running a search by clicking on Preview result counts:

Advanced Search

Author Search
Within quotation marks, enter the surname first, followed by a comma, first initial and wildcard. Select Author from the drop-down menu.
Example: "jensen, m"

Journal Search
Enter the journal title by its standard abbreviation within quotation marks. Select Publication title from the drop-down menu.
Example: "am j hosp palliat care"

Thesaurus Searching
AMED citations are indexed using a controlled vocabulary, AMED Thesaurus which is based on MeSH
(Medline’s thesaurus terms). Searching using thesaurus terms can increase the precision of your search.

Click on the Thesaurus link to enter a word or phrase and see all terms in the thesaurus that include your word(s), after clicking on Find. Click on the icon to the right of a term to view additional notes for it.

To view terms above and below your search term in the thesaurus hierarchy, click the blue highlighted term (link) as in the example below for ‘Acupuncture Therapy’.

**Explode**
Normally, if you Explode a term, ProQuest Dialog will automatically include any more specific terms that appear below your term in the hierarchy but this feature does not work in AMED. Instead, to select both a broader term and all its narrower terms, click every checkbox to the left of the terms, including any further narrower terms.

When you have finished selecting thesaurus terms from the list, click on **Add to search**.

**Combining Sets**
It is possible to combine multiple concepts together to perform a more specific search. Use one of the following Boolean operators to combine search sets:

**AND**
The Boolean operator AND narrows search queries. Retrieved records contain all terms.
Example: Asthma AND Eczema (see set S3 below)

**OR**
The Boolean operator OR widens search queries. Retrieved records can contain either term.
Example: Asthma OR Eczema (see set S4 below)

**NOT**
The Boolean operator NOT excludes terms from search queries.
Example: Asthma NOT Eczema (see set S5 below)

**Limiting Sets**
The **Search options** tab below the search box provides limit options for: publication date, language, and with an abstract included.

**Displaying and Selecting References**
- Click the number of results link beside the set you wish to view. The first group of citations will be displayed. The default display is in groups of a maximum of 100. Click on the Next page link to view further citations, if results exceed 100.
- To view the abstract and thesaurus terms of an individual reference, hover over **Preview** beside the citation.
- To select a number of references for printing or saving, either click the **Select** checkbox at the top of the page to select all references listed on the page, or click in the checkboxes to the left of individual citations to select a number of references.

**Saving References**
To save your selected items, hover over to choose an output format (e.g. RTF, PDF, RIS) from a drop-down menu. A pop-up window will then appear offering a choice of display formats (e.g. Citation/Abstract), to include a copy of your search strategy (Recent searches), and Document numbering and to Show hit highlighting. Finally, click on to complete saving.

**Printing and Emailing References**
To print or email your selected items, click on the appropriate icon (or ) and follow similar instructions to saving references.

**Help**
For further details on using AMED, click on the text link that appears at the top right hand corner of each page. Please also refer to the Further Tips for Database Searching helpsheet.

**Exiting and Logging Off**
When you have finished using the databases, log off using the text link on the blue toolbar that appears at the top of each page.

Please contact us if you require any further assistance using the databases or wish to book a tutorial. Contact details are provided in the banner of this helpsheet.
